

# How to prepare for Refinishing your Kitchen Cabinets

## Duration of the Project

Depending on the size of your kitchen and how many doors and areas you have determines how long the process will take. Typically, refinishing your cabinets will take 4-6 days.

## Our Masking

We will be masking off all floors, countertops, backsplashes, walls, and ceilings as needed. We will also create a plastic barrier wall to contain everything inside the kitchen area.

We will use a ventilation system with filters to keep the dust down and contain the area.

This masking will remain onsite and in place while we refinish the cabinets.

## Items inside and out of Cabinets

We will need you to remove all items on the countertops and kitchen area.

You do not need to remove all items inside the cabinets as we mask the front off with plastic though you will not have access to the inside of the cabinets during the process.

## Fridge, Stove and Microwave

We require you to move these items out of the kitchen so we can spray all sides of the cabinets. Moving the fridge into another room will allow you use it while we are refinishing your cabinets.

## Handle with Care

We promise to handle all areas with care. We want to make this process as easy and accommodating as possible.
